

Payne Institute for Public Policy Virtual Seminar
9:00 A.M. MT | July 26, 2024

Dr. Maryam Golnaraghi

**Director of Climate Change and
Environment, The Geneva Association**

Leveraging the Power of the Insurance Industry to Expedite Industrial Decarbonization

Meeting global climate targets requires industries, including large carbon emitting industries such as steel, aluminum and aviation, to adopt a range of new technologies and processes that accelerate their decarbonisation. However, many such climate-related technologies remain in pre-commercialization stages, are capital intensive and are highly complex. They have untested risks, a wide range of challenges with scaling and market readiness, and scarcity of data for assessing insurability conditions. This webinar explores how to leverage the expertise of the Property and Casualty (P&C) insurance and reinsurance industry to frame risks, enhance insurability conditions and deliver a full suite of insurance solutions, all of which are critical for unlocking capital, expediting market readiness of these technologies and enabling their adoption by industrial sectors.
